

FOR IMMEDIATE RELEASE

Yulio Technologies unveils groundbreaking Augmented Reality (AR) integration for CET Designer.

Yulio Technologies Inc., a leading Virtual Reality (VR) presentation tool provider for the contract furniture industry, announces a major enhancement to its "Yulio Jump for CET Designer" extension. The latest version seamlessly integrates Augmented Reality ('AR') capabilities into existing Yulio presentations, allowing users to effortlessly tag individual or group objects within CET Designer ('CET') projects for instant viewing in Augmented Reality.

Yulio Jump has long been a staple for users seeking to create immersive VR experiences directly from CET using the 'Jump' extension. With the newly introduced AR functionality, designers and marketing professionals can elevate their presentations with interactive AR elements. This innovative feature enables the creation of even richer presentations and faster client decision-making. Early Beta trials suggest that the selective introduction and use of high-quality Augmented Reality experiences during the early-stage mockup process can save both time and dollars.

"With this latest enhancement to Yulio Jump for CET, we are continuing to deliver on our commitment to providing powerful yet easily accessible visual selling tools for the industry" states Rob Kendal, Managing Director at Yulio Technologies. " Designers can now easily incorporate AR elements directly into their CET projects, offering clients a richer and more interactive virtual experience,"

The process is intuitive and user-friendly. Users simply designate any furniture object within their CET project as an 'AR' component and then create the 360 presentation in the normal way with a couple of clicks in the Yulio Jump extension. These 'tagged' items are then seamlessly integrated into the finished Yulio project for presentation in AR, on any smartphone or tablet allowing the user to see and experience the item in the actual intended space. Or, when going the extra mile, you can view them with the latest VR/AR headset for even greater realism.

Ian Hall, Chief Product Officer at Yulio, emphasizes the impact of this new feature, stating, "By expanding the capabilities of Yulio Jump for CET to include AR, we are improving the 'try before you buy' options that were already available through VR. This opens up new possibilities for showcasing designs in a way that is interactive and aligned with the evolving expectations of clients."

The enhanced Yulio Jump extension for CET Designer is available immediately for download from the Configura Marketplace (for existing Yulio subscribers at no additional charge), providing users with a versatile platform for creating VR and AR presentations.

About Yulio Technologies Inc.:

Yulio Technologies is a leading provider of Virtual Reality (VR) presentation software, dedicated to revolutionizing the virtual presentation of commercial furniture solutions. With a focus on innovation and accessibility, Yulio empowers users in the contract furniture industry to create engaging and immersive experiences for their clients.
